Specialization: Evolved stars, dust, long period variables, symbiotic Miras, Magellanic Clouds, dwarf galaxies, Local Group, M31, UV to mid-IR imaging and spectroscopy, radio interferometry, spectral energy distribution (SED) fitting, time-series analysis, image alignment and drizzling.

Research Interests: The impact of evolved stars on their environment and vice-versa. Specifically, the effects of metallicity on the dust production, wind dynamics, mass-loss mechanism, and evolution of Asymptotic Giant Branch (AGB) stars and Red Supergiants (RSGs). This involves studies of statistical samples of nearby AGB populations using primarily the Hubble and Spitzer Space Telescopes.
